

How does it Work?

What is SecureITnet?

SecureITnet is a Java based program which offers both the best in security as well as the most powerful compression algorithms to protect your data.

Unlike some other backup software, SecureITnet is capable of performing 'Brick Level' Microsoft Exchange backups so that in the event of a system failure, the restoration of data is as quick as possible.

Will it run on my systems?

Almost Certainly yes. SecureITnet is virtually platform independent and will work on the following:

Microsoft Windows

Mac OS 10.2

Sun Solaris

AIX Unix

SCO Unix

Linux

Novell

Can I use my computers while it is running?

Yes

Can it work on a laptop?

Yes, but the computer needs to be on for it to work!
